Change how graphs look in Grapher on Mac - Apple Support

Grapher creates three points as default (these can be edited, of course). To edit the individual points, click on Edit Points. You can add and delete new ones as well as import from CSV files (click on the Import button then locate the file you wish to import). Adding new points to your custom data set.

Getting Started With Grapher, Your Mac's Built-in Graph Tool

Grapher handles implicit equations (i.e., those where the x's and y's are mixed together) with equal aplomb. To add a new equation to the existing worksheet, you can go to the menu and choose Equation -> New Equation, or you can hit Command-Option-N. Then type an implicit equation into the equation editor, e.g., $x^2/4+y^2/1 = 1$.

Mac OS X Grapher - Getting Started | The Putterer
