starts on a mental path of discovery, comprehending that death will indeed occur and believing in their own mortality.

How to Recognize When Your Loved One Is Dying

Physiological death occurs when the vital organs no longer function. The digestive and respiratory systems begin to shut down during the gradual process of dying. A dying person no longer wants to eat as digestion slows and the digestive track loses moisture and chewing, swallowing, and elimination become painful processes.

The Process of Dying | Lifespan Development

During the dying process, the body's systems shut down. The dying person has less energy and begins to sleep more and more. The body is conserving the little energy it has, and as a result, needs less nourishment and sustenance. In the days (or sometimes weeks) before death, people eat and drink less.

What happens during the dying process? |

HowStuffWorks

Death is a normal part of the life cycle and something everyone will go through. Being aware of the stages one goes through at the end of life will give loved ones an opportunity to be less fearful. Knowing what to expect will allow you to be present in the moment with much compassion.

Stages of the Dying Process and What to Expect ...

Just as you are losing someone you love, the dying person is in the process of losing everyone and everything he/she loves. It is only natural to be withdrawn. If the patient is allowed to express his/her sorrow, the stage of final acceptance will be easier. If the person is unresponsive, remember hearing remains all the way to the end.
