### Diesel Engine Problems

Technically, diesel engines emit black smoke when they eat more fuel than there is not enough air available in the system. The reasons for decreased air in the system or increased fuel in the system can be many, e.g. a faulty injector, diesel pump, air filter and EGR Valves can be the causes.

### 11 Common Problems Faced by Diesel Engines

A lot of times, despite being used for heavy machinery, diesel engines are unable to meet the power requirements. This is as a result of clogging inside the engine tubes, dirty filters, injector problems, etc. This problem is most often detected while starting up the engine or when at peak performance.

### 9 Most Common Diesel Engine Problems | Easy Way To Avoid

A common problem in diesel engines is the EGR valve getting stuck because of carbon deposits. You would be surprised how much sludge and carbon gets deposited in the air intake manifold due to EGR action. At 100,000 miles the EGR valve is likely to be full of carbon and ripe for replacement.

### Common Diesel Engine Problems That Require Repair

These include the timing belt snapping, piston rings becoming worn out, piston slap (a noisy piston), the piston becoming burnt (usually by dirty fuel injectors), and the piston becoming cracked (caused by frequent use of poor quality fuel).

### The Most Common Diesel Engine Problems and Solutions

Blue Smoke - blue smoke results from burning engine oil. This is a mechanical problem because engine oil isn't supposed to be getting into areas where it can be burned. There could be a faulty injector pump or lift pump, which would allow oil to mix with fuel and be burned. The valves or valve stem seals could be bad.

The exhaust is generally a result of an imbalanced air to fuel ratio, leaning on the side of too much fuel and not enough air. A faulty injector, injector pump, air filter, EGR valve, or even turbocharger could be the root of the problem. 4. Hard Starting. Some diesel engines have a difficult time starting or they experience a delayed start. This is usually a sign of low compression or a fuel delivery issue.
