Flow Chart Paper Tape
Punched Tape: This shape depicted an old computer punched tape input, again rarely used in present day flowcharts. Sometimes, this shape is also called a Paper Tape. Summing Junction: This shape is used when multiple input branches converge into a single process. It is also used as the logical AND. Or: This shape performs a logical OR on the input braches. Also, this shape can have multiple output branches.

Flowchart Symbols: What they Represent?
Also referred to as the "Data Symbol," this shape represents data that is available for input or output as well as representing resources used or generated. While the paper tape symbol also represents input/output, it is outdated and no longer in common use for flowchart diagramming.

Flowchart Symbols and Notation | Lucidchart

The easiest way to print out a flowchart that is larger than your printer paper is to print it onto multiple pieces of paper and then tape the pieces together. Before you start printing, however, it's important to make sure that the drawing page, as it appears in Visio, contains the entire flowchart.

Create a basic flowchart in Visio - Visio

Punched tape is another antiquated technology. A software program would be saved by noisily punching holes in a paper tape. The paper tape was about an inch wide and hundreds of feet long. The holes were large enough to see. As the minicomputer punched the tape, it would stream onto the floor.

What do the Different Flowchart Shapes Mean?

Flow Rate Selection. When selecting the flow rate for your drip tape there are 3 considerations to keep in mind. Run Length – The longer the run length you need per row of tape then the lower the flow rate per emitter is needed. The reason is that longer run lengths have more emitters and the more emitters there are the more water is being used per line.

For longer rows up to 1000 ft. lower flow drip tape must be used or a larger diameter drip tape. To find flow (GPM) needed for a field or zone, multiply total linear ft. of drip tape x drip tape flow rate. Example; total linear ft. of drip tape 12,561 ft. ÷ 100 (for the flow rate per 100 ft.) x flow rate.45 = 56.5 GPM.
