Abstract: A supervised learning neural network classifier that utilizes fuzzy sets as pattern classes is described. Each fuzzy set is an aggregate (union) of fuzzy set hyperboxes. A fuzzy set hyperbox is an n-dimensional box defined by a min point and a max point with a corresponding membership function. The min-max points are

The fuzzy min-max neural network classifier is a supervised learning method that takes the hybrid neural networks and fuzzy systems approach. The original fuzzy min-max neural networks model was developed by Simpson [16, 17], and was modified and improved in a later version [18, 19]. This version offers a new approach
