Peroneal Tenosynovectomy

Tenosynovectomy is the excision or resection of a tendon sheath. Tenosynovitis is inflammation of a tendon and its sheath. Most acute cases of flexor tenosynovitis (FT), which involves disruption of normal flexor tendon function in the hand, are the result of infection.

Tenosynovectomy Definition, Surgery, Procedure, Recovery

Peroneal tenosynovitis usually responds to conservative therapy. Early diagnosis and management are imperative because improper or delayed diagnosis and treatment of peroneal tenosynovitis may lead to progression of the tenosynovitis to peroneal tendon rupture, ultimately limiting the benefit of nonoperative treatment. For refractory cases, endoscopic tenosynovectomy is indicated.
